**from Stanley R. Spector
President & CEO of Semispec Int'l
& Advisor
Atlas Monetary International Trust (AMIT)**

As a major participant in AMIT's National Economic Program (NEP), I would like the visitor's to this website to know the importance of this program and Semispec's dedication to assuring its success. We are aware of the effort of many people to discredit Andrew J. Cipollo and his dedication to carry out Howard Hughes' legacy and I can certify by personal witness that those who do so are people who have performed criminal acts or been exposed to have nefarious agenda's to take control of the Trust's assets.

There is a national and international malaise, which is threatening our freedom and well being all over the world. It operates openly and freely by a league of banks and bankers whose only interest is to control the world's economies through their economic manipulation that has been extant for over 100 years and continuing to grow in power and control. There are those of us who believe this force can be neutralized through the efforts of AMIT and its international associates by collective efforts in low cost clean renewable energy, clean available water supply, healthcare for all, renewed land and expanded agriculture with increased food supply, job creation technology development and the guarantee of financial support from privately owned banks with massive silver and gold reserves. AMIT fulfills these requirements. Thus, AMIT has the potential to lead the way to achieving these objectives with the help of other organizations with whom it is allied. This is the legacy of Howard Hughes.

As a participant in this program, I bring to the Trust over 25 years of personal association with Howard Hughes' organizations highlighted by being the father of the Apache helicopter, one of the most successful weapon systems ever fielded and employed by the U.S. and still working effectively in Afghanistan and Iraq in support of our troops. While working at Hughes Aircraft Co. and Hughes Helicopters, I successfully participated in several CIA and Top Secret DoD programs while also serving in the Air Force Reserve for 30 years. In this capacity as a Colonel, I received a Presidential award for uncovering a major security threat to our country and NATO for which the President initiated a billion dollar project to counter the Soviet threat.

In my 7 years at Hughes Aircraft Co., I also introduced the first anti-tank helicopter weapon system leading to 14 years of work at Hughes Helicopters in the development of the light attack helicopter for South Korea and Israel. This became the precursor to the Apache helicopter and several other weapon systems for the Republic of China and other countries. I attribute my success to God and the dedication of Howard Hughes who was a super-patriot, willing to put up his personal fortune to help the USA in its time of need. It is this background that inspired me to exercise my entrepreneurial spirit and move on in my own company for the advancement of solar energy, to which Howard Hughes was also dedicated.

With good fortune, I was introduced to Dr./Professor Herbert F. Mataré, the recognized inventor of the transistor. Together, we designed and developed the world's most advanced solar system using gallium arsenide solar cells made from a low cost material produced from a proprietary process invented by Dr. Mataré. I purchased the rights to this process from Dr.

Mataré and proceeded to finance the pilot production with my own money with some from other supporters, creating the Gallium Arsenide/ Concentrator Photovoltaic (GaAs/CPV) System adopted by AMIT for the National Economic Program. We then combined the GaAs/CPV System with ground electric power used by Howard Hughes for over 40 years reducing the cost of electricity to 3¢/kWh, a major breakthrough. The importance of this System is its low investment cost resulting in the low cost electric power for worldwide use. It is currently (in 2010) over 10 years ahead of any other solar technology based on several independent studies. The importance of this technology is the ability to generate solar electric power at a substantial profit without any subsidies, which is regarded as providing “grid parity”, i.e., power equal or lower in cost than fossil fuel generated power.

The profit generated will be directed by AMIT (a non-profit entity) to providing 100% healthcare and retirement for all workers and their families including the indigent, the homeless and the poor under the Triple Crown Program. This is only a small part of AMIT’s National Economic Program, described elsewhere on this website, in addition to numerous other programs, such as the aircraft based Vacuum Skimmer Program to clean up the Gulf oil spill and use of the Trust’s Glomar Explorer vessel to cap underwater runaway oil wells, described on the website.

TRUST

To all visitors of this website, I invite your TRUST, support and participation in AMIT’s National Economic Program through its Triple Crown Program and in the sale of its precious metal assets known to many of you. AMIT, Andrew Cipollo and I are worthy of your TRUST and our ability to successfully carry out the National Economic Program with a guaranteed return on your investments from the tremendous assets of the Trust. Our team of people bring years of successful experience in working for our Country’s greater good in securing life, liberty and the pursuit of happiness for our citizens, which has been the objective of our Country from its beginning and taken up by the Trust. AMIT and its participants have protected and defended the Hughes legacy to the point of personal danger and threat to our lives by criminal elements but we have stayed the course against these forces.

To professional people who have the dedication and belief in our technology and humanitarian objectives you will read about on this website, we invite you to help us achieve the objectives of the National Economic Program and bring to the world the solar energy, ground electric energy and “perpetual motion” energy projects already invented by the Trust and its associates. We need the expertise and participation of thousands of people to bring forth this magnificent advancement to humanity and the world. Come one, come all and God bless you.

Stanley R. Spector
